20. Any other general data the University would like to include/ specify ?

NA Stands for 'Not Applicable'

+ In respect to reply given for Item No.18 above, we may like to add here that although the University was granted approval for its **University's Directorate of Open and Distance Education programmes w.e.f. 2008-09**, however, when the University started its exclusive **Modular Based Bachelor's Programme in Computer Applications – Industry Specific (BCA-IS)** in this session, the University was flooded with large number of complaints from the Centres which were approved for the conduct of the programme as well as from the students enrolled therein. Hence, the Academic Council of the University took a conscious decision to keep the functioning of the University's Directorate of Open and Distance Education in abeyance and decided to launch upon the programme through distance and open education mode only when its own infrastructure is created at vital locations in couple of years.

To this, it would be pertinent to mention that the University's Court in its 5th Meeting held on 18.06.2010 took the decision which read as thus :

“Online Academic Programme be considered for introduction only after assessing genuine demand and receiving specific approval of the Court of the University and thereof making meticulous preparation and putting up effective monitoring system.”

The aim of the IPR Policy is to sustain and grow innovation and creativity, foster institute-industry linkages and entrepreneurial culture for the betterment of the society.

Universities and other public research organizations are increasingly protecting their intellectual property – from patenting of genetic inventions to software use. The rise in university focus on IPRs, in particular, patents has occurred against a broader policy framework aimed at fostering a greater interaction between public research and industry in order to meet stakeholder's expectation from R&D and innovations. The general strengthening of intellectual property protection world-wide as well as the passage of Patents Act 2005 aimed at improving technology transfer is additional factors that have facilitated the awareness about significance of patenting and other forms of intellectual asset protection.
